

Chemical Protection Against the Risk of Cancer: The Broccoli Connection

Paul Talalay

*John Jacob Distinguished
Service Professor of
Pharmacology and
Molecular Sciences,
Johns Hopkins University*

October 6, 1995

Friday 3:30 pm

Third Floor, Levis Faculty Center

919 West Illinois Street, Urbana

University of Illinois at Urbana-Champaign

Could George Bush have made a mistake when he didn't eat his vegetables? In bypassing broccoli, a member of the *Brassica* family of vegetables, President Bush was missing sulforaphane, which, like many chemicals from plants, has demonstrable anti-cancer properties. Paul Talalay, founder of the Brassica Chemoprotection Laboratory at Johns Hopkins, will discuss the role of diet in cancer prevention, including results of his most current research.
