

A Passion for Discovery

Nobel Prize Women in Science

"I am not one of those...who think that a woman (scientist)...can disinterest herself from her role as a woman, either in private or public life."

Irène Joliet-Curie

Irène Joliet-Curie, Nobel Laureate in Chemistry, 1935, is shown above with her younger sister, Éve, and mother, Marie Sklodowska Curie, Nobel Laureate in Physics. 1903 and Chemistry, 1911, While only eight other Nobel Prizes in science have ever been awarded to women, more than 300 have been presented to men. Sharon Bertsch McGrayne looks at the lives, struggles, and discoveries of these remarkable women, giving inspiration to all who would follow in their footsteps in overcoming barriers to practicing and excelling in science and engineering.
